QEP's TileTrim Square™ is specifically engineered to assist in cutting tile trims and jollies, accommodating 95% of tile trim types on the market. Patented, this indispensable tool is perfect for both professional tilers and DIY enthusiasts who demand accuracy and efficiency in their projects. Cutting metal trim or profiles can be challenging. By firmly holding the metal trim, allowing for a flawless 45° cut every time, the TileTrim Square eliminates blade launching due to insufficient grip that often results in wasted materials and uneven cuts.
